

SafeMatch®

Clinical Iris ID System

Positive ID in the Blink of an Eye

The SafeMatch® system delivers the proven power of iris identification (the most accurate biometric) in a package that's purpose-built for the health care industry. SafeMatch® products set a new standard for security, privacy protection and patient care, with an audit trail that proves the subject was present and correctly identified.

A No-Brainer at \$249⁵⁰ per Camera

Finally, the touch-free instant ID technology used in airport security is cost-competitive with less-effective ID options like cards, fingerprints, and tokens. The LifeSaver® USB camera plugs into existing workstations. You pay a modest setup fee and a reasonable software subscription fee based on the number of users. Contact us for details.

Easy to Use, Easy to Integrate

- Patient or staff member looks into the handheld USB camera.
- Server translates the iris pattern into your facility's ID number.
- System delivers the identifier to any medical software program for instant sign-on or record retrieval.

**Accurate Staff ID...and
the Right Patient Record -- Every Time.**

Powerful Patient Safety Benefits

Patients glance at the camera to instantly deliver their patient ID number to your clinical applications without any other input. Staff members get the right record every time. Touch-free positive ID at key patient interaction points eliminates duplicate records, prevents fraud and medical identity theft and speeds intake and treatment.

The Ultimate Staff Authentication Solution

This fast, accurate, user-friendly identification product provides absolute security and a clear audit trail for HIPAA compliance and e-prescribing authentication.
